Hello WebTV'ers

Have you ever wished that you could take advantage of an IRC network doing everything that computer users can do? Have you wanted to start your own chat room (channel) and break out of the web based chats that you have been locked into? Have you wanted to take full advantage of channel and nickname services?

The time is now.

We have a WebTV to IRC proxy running on SorceryNet. You can get there by using server: cookie.sorcery.net and port: 9997. Once you are there, the proper conversion are done at the proxy level, and your "slash commands" such as /KICK and /BAN and /MODE are intercepted at the proxy and converted to the appropriate ircd (irc server) commands.

You can find more information at:

<http://www.sorcery.net/help/index.html#WebTV>

If you are new, you might want to substitute #help for #WebTV where channel is designated in the instructions.

Those in #help are ready and able to help you out.

There are also instructions on how to join the webtv@sorcery.net mailing list for users and testers of new features. Since none of the developers have WebTV, we rely very heavily on the testers to tell us what the bugs are and what new features they'd like to see :).

Hope to see you there

-Tony
